

Introductory review on the books of Aspect Series with title pages

*In the innermost part of our mind there are no equations, but a simple idea.
Once we explore it, it becomes so irresistible and trivial that we would say, oh how nice, how could it be otherwise?*

John Archibald Wheeler

What is our origin, how the organization of matter and the life itself started? Whether there was an Initial Big Bang, and if so what had led to it? How was Universe formed? These are questions of interest for all of us. The origin of material life and gravity still has some unclear aspects. The Primary Explosion is the theory of beginning, from where we originate time and space, and material substance, and from this the formation of life. All we can comprehend about the first period of Big Bang is that it might have been a complicated, unexplainable singularity, which might have started with a steady explosion. In the book titled Aspect the author doubts that the origin of time, space and material can be derived from the Big Bang Theory, and also that the initial process is incomprehensible. The author also undertakes to outline the possible actions that did occur. Einstein also rejected the theory of the primary explosion during his life, and integrated a Universe constant into the space equations. His perception of the Universe constant was correct and its integration into the space equations was a necessity thus resulting in present space conditions. Space itself is in a static and permanent state, in which the scattering material substance whirls, mixes, concentrates some places and then it all disperses. All these occurrences can happen at various speed of time, either slowly, linearly(?), or in much quicker pace as well. The permanent change of the Macro Cosmos as it takes place in the complex space led to the integration of local particles, and formation of fields. However, the changing process and expansion of fields are not unlimited, because they can collapse due to the compressing force, known as gravity. Aspect is the first book of the development of a scientific theory about space. It unveils the formation of the conditions before singularity, and the possibility of the local primary explosion. The origin and organization of life and matter can be understood. The space organizations are extremely proportional, analogue structures, known as fractal systems. By revealing this set of rules our attention can focus on numerous correlations that are beyond our present understanding, thus our overall knowledge on space and time, organization of matter and life may improve.

Aspect 1

EVOLUTIONAL THEORY

Table of content (A/4)

1. Starting point or basic knowledge on the Universe and its operation	page 5
2. The algorithm as set of rules, and the death of stars	page 8
3. Proceedings in the gravitation condensation	page 10
4. The state that might have led to the primary explosion	page 14
5. Once again about the primary explosion – a different perspective	page 17
6. Evolving of potential energy and dissimilation of matter into kinetic energy	page 20
7. A look into black holes. (About the lenses of high energy density)	page 24
8. Transformation, remodeling and transmission of energy impulse, and its incorporation into effect-accumulations	
9. Reconsidering pressure, energy density and vacuum	page 29
10. Transformation of kinetic energy into potential energy and matter	page 30
11. Events following the primary explosion: energy concentration leading to creation!	
12. Unification of fields of force containing impulses	page 37
13. Looking again at the effects that caused alteration in magnetism of gravity	page 38
14. Reconsidering the lense effect of gravity	page 42
15. Formation of the particle-like energy effect	page 46
16. Ranking energy into organization levels	page 51
17. The sign, the information and the link of effects	page 54
18. Information-identity influencing the effect combination	page 60
19. About the formation of dimensions and their link with Globular lightning	page 62
20. The structure of Space	page 66
21. The structure of Gravity	page 75
22. The structure of Time	page 87
23. Fractal organizations	page 94
24. Change of effect with low interaction as emission of energy and information	page 96
25. About the faith and origin of the necessary God	page 99
26. The fractal character of the life-like symbiotic structures	page 102
27. Changing low interactions in the human environment	page 112
28. Human information, body language and mimics	page 114
29. Change in the ratio of incoming and outgoing information and the inner rhythm: the sense and divisions of time.	
30. Information, sensation and evolution!	page 119
31. Low interaction energy coming from the dissimilation of potential energy	page 123
32. Cavity effect and the dissimilation of the space energy	page 126
33. Formation of the evolution scale changes	page 128
34. The first letters of the information, and the formation of the meaning	page 132
35. Communication channels and frequency bands of information	page 135
36. Energy developing and vitalizing effects of musical impulses	page 140
37. Acknowledging a sense of time and biorhythm. Is there a choice?	page 144
38. Summary	page 149

This organization is a fractal system that integrates the local fields as periodic repetitions of a simple rule on different energy levels into a mutually existing multi-level system. The system of effects observed with insufficient knowledge, that cannot be understood with our present experimenting means and methods has already served as the basis of many mistakes, which resulted in frequent withdrawal of theories and building up new more appropriate verifiable scientific theories. One of the greatest mistakes is the primary explosion and the theory of the expanding universe, which physical explanation needs correction.

This well known material is nothing but recycling organization of fields determined by time and space and distention of bubbles adjusting to the environmental level.

The space can be seen as a living organization, an endless crystal, and the interacting particles of the spherical waves either disperse or converge at some parts of this crystal-lattice.

The homogeneity of the perfection of space is deflected by the change, which inside the illusive chaos creates a pulsation of self-structuring harmonic balance.

Horizontal and space

Table of content (Size A/4)

1. Introduction of analysis and the basis of the space theory
2. Basic physical mistakes
3. Negation of the primary explosion, the misunderstood Doppler-effect
4. Gravity is other than force of attraction, it is difference in effect changes
5. Expansion of effect changes, recalcitrance of matter and conductivity
6. The effect system operating in the Universe
7. Elements of space effect identity
8. The connections and coherence of effect fields and effect modules built in fractal system
9. Formation of organization levels

10. Understanding the real cause of cancer
11. The beginning
12. Effect modules registering the occurrences of space, ripples of space waves, whirlpools
13. Possibility of formation of life
14. Exploring space dimensions
15. Information module-postulate which helps to understand space
16. Effect identity, the connecting power between modules
17. The resistance and the conductivity of the space
18. Wave exclusion effect, known as Casimir effect
19. The DNA as a copy pattern and time program
20. The possibility of ANTIGRAVITATION
21. The possibility of astral bodies
22. Simple evidence of the Casimir effect-exclusion
23. Connection between exclusion and capillary effect
24. Reorganization of the information energy that fills space
25. Changes which create interactions of three dimensional matter
26. Formation of progression time and the information energy
27. Space and the space energy which is also called information
28. The repetition of information
29. A comparison between living and inanimate structures (indistinct outlines)
30. Complexity as the direction of development leading to formation of life
31. The body building manifestation of awareness, faith and volition
32. The role of FAITH influencing the progression of time
33. Time progression or organization time of informative energy fields
34. The influence of different built-in information on the organization time
35. The cause of cancer and the possibility of prevention
36. Geo-radiation and its effect on the health
37. Possibilities of alternative life organization
38. The prevention of maladjusted dissimilitude; the reproduction
39. Information identity and dissimilitude
40. Changes of information
41. Akasa Chronicle
42. Impulse as a life opening moment
43. Connection between diseases and active agents
44. The river effect
45. Energy and information
46. Intensifying of information
47. Change as the basis of the energy organization of space and life
48. Information consumed with foodstuff and health
49. Disinformation and its effect on the life organization
50. The influences of interstellar materials on the life
51. Information difference and diseases
52. Dangers of information of unknown origin
53. Coherence between health, miscommunication and the immune system
54. Changes affecting the soul and health
55. The influence of completing the space and the effect of information identity on the conductivity
56. About the energy density of space and material fields
57. About the larger fractal organizations
58. Formation of the 3D material and its reconstructed density
59. The building of information energy fields
60. The material organization of dispersing information energy by impulse
61. Human and other life organizing effect systems and energy fields
62. Summarizing thoughts
63. The Swan-song effect

While arguing with Heisenberg, Niels Bohr once stated that all the great ideas always seem odd and strange at first, because the explorers themselves are only able to comprehend them more or less, while the others because of the lack of coherence of such information do not understand them at all.

This study reveals the rules of the organization and current of the material substance, the way the energy of the particles compresses into transforming fields, atoms, planets, stars and living creatures.

The study introduces the pace of change and its consequence on the transforming fields, and its effect on rhythms known as time, health, and time symmetry.

Fax: 36-72 516 832 Email: Info@pecsiglas.hu

Aspect 4

Rules of gravity and time:
Know It So You Can Understand is the title of the
series of which this is the 4th book.
Size: A/4 2X 180 pages

This book consists of two distinct parts:
The first part deals with the physical effects
which led to the organization of matter and
gravitation, which is nothing but the
difference in space compression caused by
velocity;
This sums up how the matter is organized.
The second part of the book is called
“**Weather Aspect**”, with the sub-title:
**Influence of the stream of particles on the
weather.**

The author suggests a definite correlation
between the environmental changes of the
Inner Solar System, the Interplanetary
system and the global meteorological
changes of the Earth, which are responsible
for formation of ENSO and cyclones,
tornadoes and typhoons.

Knowledge is the basis of understanding, and also the way we connect new information to the old existing theories; but most of us only have little or different experience in doing this. The author's goal is to demonstrate relative possibilities of seemingly identical things from a different aspect, to show what and how the effects of space and energy organization are influenced. Space and material organization does not have a beginning and end; what we understand is our present time but this is also relative, a question of approach, sense and understanding. This book, due to the loads of new information is a difficult reading, and may have incomprehensible details for those with different or no relevant basic knowledge. With space and the space organization, the changes are only seemingly complicated, in fact what we call life is an endless continuous recycling process of change, complexity, decomposition and reorganization of current systems in space and time. Heaven does exist, after death the tunnel of liberation leads there, where particle-light-creatures live their joyful life in an eternal bliss. Life is not a burden though; it is a well-knit play in which God intensifies the embroilments that we human beings understand as the evolution and phylogenesis of endless changes. I recommend this book for those deep thinkers who are fond of sciences, and are also interested in non-answered questions, who want to know about matter, gravitation, and how life was formed, what the fate of the Earth will be and what possibilities await mankind in the future. I also recommend this book for those of exploring minds, and scientists, who are not content with the inaccurate or inadequate answers on these subjects, and are in favour of clarifying mistakes and misunderstandings. This book is a delicate treat for experts and those of scientific inclination, offering a wide pallet of themes which can be improved or made more accurate. The picture that coordinates and shows several scientific areas is only a sketch of space organization, which also needs clarification, and filtering and correcting previously made mistakes.

The title of the second part of the book is **Weather Aspect**, subtitled as **Influence of the stream of particles on the weather**. The author suggests a definite correlation between the environmental changes of the Inner Solar System and the interplanetary system and the global meteorological changes of the Earth, which are responsible for formation of ENSO and cyclones, tornadoes and typhoons. The streaming system of the Earth does not only have local character, it shows correlation with the solar and interstellar streams of the distant surroundings. These streams are in unanimous synchronized rhythm with the motion of the planets, which also correlate with the Earth, by influencing the streams towards the Earth. Weather is a consequence. Changes modified by the fields outside the solar system induce changes in the sun, the planets and fields of the solar system, thus continually modifying their position in space and space symmetry.

These changes in space location influence the radiation of sunlight, the motions of the Earth and all this results in changes of local weather.

This correlation system opens up the limits of the local planetary space to the correlating greater Solar system; in addition it also demonstrates the possible effects of outer space on the changes of Earth's weather.

When starting our time-journey we have different abilities and talents, allowing some of us to proceed faster, while others must move more slowly. During this long travel-time, the development of individual abilities and changes in the environment give chance for those of slower start to catch up with those who possessed greater initial velocity.

Moetrius

Table of content

Part one:

1. Reconsideration and reinterpretation of some basic physics terms
2. New aspects of gravitation
3. Extension of the equivalency interpretation by Einstein and its limits
4. Decreasing the speed of a particle and its effect
5. End of the organization period: Heaven
6. Returning from the death-trance
7. Aging of genome
8. Stream of the particles in space, and the consequences of distinguished localization
9. Stream of the environment and formation of 'greater ' fields
10. Basic errors of attracting gravitation theory
11. The formation of matter
12. Simple demonstration of gravitational effect difference based on environmental compression
13. The new gravitational approach of compressed interstellar space and space energy based on difference
14. Reorganization of matter
15. Impulse
16. Impulse as the connection between light and electro-magnetic radiation
17. Formation of electric charge
18. Significance of the frontier section around the fields
19. Consequences of the impulses
20. Crystal fields, the aerial of the formation of matter
21. Connections between velocity and particle rotation
22. The Evolutional progress of matter and life
23. The Evolution of material organization
24. Space structural consequences of congested particle fields
25. The condition of space
26. Background radiation observed in the Universe
27. The pyramid organization of our life structure

Table of content

Part two

28. The influence of the planetary stream on the weather
29. Changes in the energy stream around the local fields as the basis of the global weather changes
30. Significant events of the free interstellar space
31. Connection between the planetary space and the increased tectonic crust movement
32. Connection between the human, the other living matter and our planet
33. Planetary space changes that influence weather patterns
34. Operation of the effect mechanism that causes sun flares
35. The effect of the stream of particles of Planetary space on the changes of Earth's weather
36. Hypothetical cause and effect of meteorological features, like ENSO and El-Nino
37. Processing information, harmony and understanding
38. Some spontaneous thoughts in connection with this subject
39. Structure of the interstellar fractal system
40. Formation and harmonic organization of the space stream and its mechanism
41. Interaction of space and environment
42. Influence of stellar space on meteorology
43. Changes of sun flare activity and the solar wind
44. Consequences that might effect mankind
45. Further developments of sun flare activity
46. Long term consequences of the sun flare activity
47. The trap of subjectivity
48. Formation of perception, realization, understanding, memory, knowledge and communication
49. The relativity of time
50. The definition of time and resolving time (twin) paradoxes
51. The possibility of perception and reaction
52. Possibilities of the atomic organization and evolutionary divergence
53. Ionic matter and life organization
54. The covalent link of matter and life organization
55. Moral teachings of the book on Mars mystery
56. The possibilities of the formation of planets
57. The correlation between impulse disaster and the death of planets
58. The message of Nostradamus for mankind after the year 2000
59. Rules and consequences of impulses
60. Thread of Ariadne and the Akasa Chronicle
61. Foreshadows of convergence of interstellar fields and their prospective consequences
62. Consequence
63. Consequences of the recognized correlations on our every day life and future

Epilogue: Outside and inside, aka Time travel

Aspect 5

The fifth dimension
 Inside or outside, or how to
 understand the possibility of time
 travel

Formation of future based on the past

Published by Globusbau Ltd,
 25 Zsolnay Street, Pécs-7630

Aspect 5

The fifth dimension,
 Possibility of time travel

This is the 5th book of the Aspect series
 Size B/5 170 pages

This 5th book reveals recent correlations of the matter and space organization theory explained in the previous books and helps to understand the possibility of simultaneous co-existence of past, present and future.

The micro- and macro-cosmos is a harmonic, analogue, instant reality formed on the surface of the present, while the past and the future can be seen as its reflection on the colliding surface, and the contrast between the two can be different.

It takes a long time for the past changes in the distant interstellar space to get here, thus they only have influence on our future. Similar changes that occurred in the past get here in our present and modify the local conditions. Space and time correlate with each other, but changes that occur in the distant space can get here with a considerable time delay.

Using the traditional knowledge of physical rules this book makes it possible to understand the possibility of simultaneous co-existence of past, present and future, thus legitimizing access of information known by us as astral travel or time travel.

Hypnosis is not the only method that can be used to recover subconscious information; there exist a number of forms, less complicated, more comprehensible and workable for anybody. For example, the human mind, which can be considered a collective sense of our particles, can be used to communicate with the smaller colonies of our particles, we can then understand the changes that occur as possible rules of information that refer to the future.

With the help of our intelligent particles we can take a space-time journey, and we can understand the unlimited and endless Universe.

Table of contents:

1. Differences and transmissions between the local and global space
2. Possible conceptions of out (side) and in (side). Formation of macro-and micro-cosmos
3. Construction of local structures: the egg as a fractal system
4. Mechanism and construction of a collective sense: operation of the collective sense of birds, schools of fish, ants and termites, bees and other colonies living in larger societies.
5. The surface of present, the past and future as an integration of waves of particles.
6. Past and future as direction of an effect. Operation and importance of the time gaps.
7. The role of temperature and its function in the change. Evolution as a mixture.
8. Resolving the time and twin paradox. The linear time=linear order or impulses and linear change
9. The possibility of non-linear changes and their consequences
10. The connection between Ley lines and the star map system drawn on the Earth
11. Forgotten correlations of the Ancient cosmic knowledge: the ancient cosmic knowledge of Mesopotamia, Babylon, the Inca, and the Egyptian builders of the Pyramids, and the Druids.
12. The correlation between the known rules of nature and what is written in the Book of Revelation
13. UFOs and forces of nature: intelligent energy plasma lenses

Synthesis is the latest book of the Aspect series that unveils the interdependence of matter and life organization, as well as space and time, i.e. fundamental laws of the Universe.

This system, with its high level of self-regulation, can be understood from the materialistic point of view as well, but this does not exclude a higher-level life-like existence of the changing process similar to that of human life process. Change acts according to the fundamental laws of the Universe that allows life-like changes in multitude of its layers and spheres. The field is organized as a changing harmonic system, which leads to formation of highly intelligent and complicated particles, no matter how tiny they are.

These particles containing their own conscience and knowledge came together to form particle colonies, living organizations and changing fields of many different size, variations and complexity. In these associated colonies and fields, knowledge and reason might merge together creating a higher level of development and complexity.

In macro- and micro-dimensions alike, life-like changes occur in an analogue way. We, mankind and the Earth, Gaia are elements of a living structure composed from smaller and larger creatures. Our mind is composed from the matter of our own particles that encapsulate knowledge in their very structure and it is part of a greater unit that is called the collective consciousness.

The fields of the Universe strive toward perfection and a greater space harmony that may result in extended lifespan and immortality of the matter in general and therefore also for the human particles. However, perfection, total symmetry and singularity can cause constraint, as the endless harmony can become monotonous. Proportional change can alleviate the monotony of the harmonious Universe.

The asymmetric by-product of striving for greater harmony and symmetry is the changing life, the imperfect and asymmetric fields, among them the human organization that has several characteristics. The Universe itself is not perfect either, because while striving for perfection, it also contains a proportional number of less symmetric changes, and thus imperfect changing fields can always form as well.

Table of content:

1. Contradictions of the primary explosion
2. The possibility of the primary explosion
3. Knowable singularity
4. Formation of impetus symmetry
5. Characteristics of the missing matter
6. The structure of gravity. The nature of gravity with a diagram.
7. The distinction of matter, beginning of the evolution cycles
8. Formation of rotating and circulating symmetry
9. The structuring and dissolving force, selective gravity. Identity and difference.
10. Rules of the rotation of fields around axis
11. The living Universe. DNA spirals of the Sun.
12. The possibility of pole-changes in the fields.
13. Rules determining material characteristics
14. A chart demonstrating the correlation of material development in a new manner.
15. The reproductive process of large size ionic fields.
16. The age of the Universe and the possibility of evolutionary development resulting in changes of matter
17. The operation of a time-switch regulating the evolutionary development
 - 17/1 Material paths, DNA spirals, and time-rivers crossing the Universe
 - 17/2 Rules of linear and abrupt evolutionary changes
 - 17/3 Demonstration of the mechanism of the time-switch
 - 17/4 Dispersion of matter of the ecliptic horizontals, the operation of the time-switch
 - 17/5 Non-linear evolution, biological jumps and correlation between their occurrences
18. Time line and periods of the greater non-linear space occurrences of the Earth
 - 18/1 The photon belt as a time spiral
 - 18/2 Correlation between earthly evolutionary jumps and time horizontals
19. Glaciations, climate changes, and other significant occurrences
20. Conclusions derived from understood correlations
21. The consequences of non-linear space changes
22. Current developing direction and the tendency of evolution
23. Analogy of Macro-and Micro cosmos
24. Correlation between the expansion of interaction and the condition of the transmitting agent

Epilogue:

The message of the living environment to the beings of this planet that are close to time jump
The messages of the crop circles

This series will be continued with the next books, which are ready for publishing and contain the options and guiding principles of the structure of human society that is based on the analogy with the known space organization and is in cooperation with the natural environment.

Further books of the Aspect series:

CHAIN OF LIFE (Life within life) The Prohibited Laws of Nature.

The grand structure. Chaos and organization. (Order in the Organization)

The ideal society, (In harmony with the natural powers)

The Prohibited Laws of the Nature

The 7th book of the Aspect series

<p style="text-align: center;">Aspect series The prohibited laws of nature Aspect 7</p> <p style="text-align: center;">Exploring the secret ancient knowledge, The Universal natural laws known by earlier civilizations, hidden from mankind.</p> <div style="text-align: center;">  </div> <p style="text-align: center;">Published by Globusbau Ltd, 25 Zsolnay Street, Pécs-7630 Tel: 36-72 516 830 Fax: 36-72 516 832 Email: Info@pecsiglas.hu</p>	<p style="text-align: center;">Aspect series The prohibited laws of nature The 7th book of Aspects Series</p> <p style="text-align: center;">Size B/5 200 pages</p> <p>This book tells about the laws of space organization that were well-known for preceding civilizations, and the first human societies left them for us as heritage. This knowledge was something that they had also inherited from the earlier civilizations. This knowledge is full of Universal understanding on the mysteries of organization of matter and life, and the operation of particle energy that flows in space. The ancient Indian, Babylonian, Tibetan knowledge has common roots with the Egyptian, African, Central and South American cultures and that of the Druids. The information heritage that was passed through by auricular and traditional myths can also be found as written evidence in numerous archeological findings, like the Tibetan and Indian holy books. These rules demonstrate the possibilities of human fate, past and future depending on the laws of the Nature.</p>
---	---

‘The prohibited laws of nature’ might as well be called ‘The secret rules of nature’ because it deals with all those secret universal rules which determine the organization of material substance and life and which operate according to the order of a greater Divine Power, the Nature.

Mankind is in trouble; he has to face the fact that instead of being an omnipotent and super-intelligent power, he is a little piece of dust among the more powerful factors of nature, nothing but a hegemonic virus, which has broken the rules of the nature.

The rulers, emperors and priests of the first ancient civilizations were against sharing this knowledge with the public as later during the Middle Ages the Church, which sometimes used all its power to fight against the great philosophers of their day, who discovered, wrote and theorized about these prohibited rules. The witch-hunt is still on, the difference is that these days the representative figures of the official Science hide the basis and real background of the legends that are well known to them.

This ancient knowledge does exist, but its owners do not let the mankind grow up, do not trust in human that they can accept their fate, and they are also jealous to share the knowledge with the public.

Gods decomposed the ancient knowledge and all the rules of Nature into particles by revival of the Phoenix of our space and time. This decomposed information can only be attained reorganizing the knowledge crumbs stored in the particles, with new cooperation, understanding the vital essence in one another and accepting one another. Less developed particles can organize their information into cooperating colonies on a higher level. Mankind still refuses to

accept the knowledge brought by the son of man, rejecting his maturity and understanding. We are born with the inclination to cooperate and the desire to help each other but declining social rules make it impossible.

Mankind broke the rule of nature. The organizations that build up our environment create a huge cooperating system, which is more and more oppressed and corrupted by man.

The interest-oriented organizations like Church, and other social structures, which ruled over the mankind, created hegemonic organizations at the top of the economic pyramid that were sustained by the lower levels of the society. Control over energy transmission created a self-supporting exploiting system, with which the greed for power and with the help of social divisions, was able to oppress mankind and society.

The representatives of this power were always on alert to keep from even risking their illegitimate misuse of authority by publishing the knowledge they possessed.

We are part of a living structure, in which everything from the tiniest material particles through the greatest stars and galaxies form living structures, despite the differences in their complications and information content.

The tiniest particles of space have less quantity of general knowledge while they own greater understanding on more specific space organization; they also understand the rules of nature and the occurrences that operate the nature and meteorology and regularly wind the clock of time.

Methuselah particles with their longevity integrated in colonies can create changing fields, which at a more developed level can integrate into living beings, trees, flowers, and other organized living structures, like insect colonies of bees, termites and ants.

There are other organization patterns of a higher level as well, by which their integration can build animals, human beings, and creatures of more complex knowledge: planets, stars and galactic organizations.

Human society has turned into chaos, galloping toward its annihilation, and two possibilities lie ahead: either to accept the harmony of nature, or as living organization, to be swept away from the stage of evolution.

We have reached a higher level of developing knowledge; we deserve this cosmic knowledge.

As a result, humans can become mature beings, who are able to know and understand, who are able to accept the rules of Nature and the Universe and who are able to adapt to this greater structure.

The order of human society must surrender to the Universal rules and to God's commandments. Individual freedom must be in harmony with society and the environment. In case humans are not able to undergo these social changes on their own, soon natural powers will do this for them. The improvement of our own present day society may lead through a chaotic path-this book was created to help guide us through this path if it comes about.

These books reveal the true nature of matter and space organization, forming forces known in the present day as 'dark energy', and give evidence that before this covalent, protein based life and simultaneously with it several ionic material organizations were also formed.

Synthesis bridges materialistic science and the Creationist approach, reveals how the rules of matter and life, (the UNIVERSE) work. From this book we can understand the origin of matter and life, our past, present and the possibilities that are in our future.

Several great changes can be expected in the life of the World, and their wind has already reached the Earth. We have reached the level of cosmic knowledge, the understanding the laws of the cosmos and the possibility of how we can integrate into our environment more successfully.

Our fate and future depends on whether during this short period of time the mankind can raise its understanding, its collective conscience to a certain level, where instead of social disagreement, a collective society can form which will integrate harmoniously into the structure of the Universe.

If the original knowledge and authentic understanding comprised in this book can get into focus of the public attention- a great demand for publication translated into several different languages can also be expected.

To gain the expectable success it is not sufficient that the subject is good and worth of general attention, professional management is essential.

This book contains everything that the author has written in his native tongue; the problem is that the Hungarian publishing and management is unable to create a World Hit with a book written in the Hungarian language.

To gain success the book, the publication and the circulation must be managed together, and this is why I would like to apply for your help, offering the opportunity of the first English language publication at the same time.

The book only is available in Hungarian language, but the review and the content of the books can be read and downloaded at the next web page:

www.pecsiglas.hu under the title „Book review”.

In case the short introduction raised your interest, I would be willing to have a larger excerpt translated into English, and send it to you.

However, the book in its entire length can only be translated with financial support.

I would like to emphasize that this is not ‘a book’; this is ‘The Book’, which may well be the ignition key of the last great cooperation in the history of modern society.

Please consider this issue carefully.

This book may upset the today’s World Order, but it can also help to attain the general social reconciliation it is seeking, the peace and survival of the mankind, as well as can bring individual consolation to the reader.

Unfortunately the author can only speak Hungarian; therefore the international marketing of the material may depend on you, the publisher.

Address of the author: 25 Zsolnay Street, Pécs-7630. Tel: 36-72-333366
